THE BENEFITS OF A MANAGED ANTIVIRUS SOLUTION FOR YOUR BUSINESS

- Our centralised antivirus solution helps to keep both known and emerging malware off workstations and servers. Our antivirus feature not only stays up to date with the latest threats using traditional signature-based protection, but also protects against new viruses using sophisticated heuristic checks and behavioural scanning. With new threats created each day, businesses can protect themselves by using these proactive methods to help ensure rock solid virus and malware protection.

STAY SAFE FROM KNOWN AND EMERGING MALWARE

- **Extensive signature-based scanning:** We use traditional signature-based threat detection to block known threats.
- **Heuristic checks:** Protects against previously unknown threats using heuristic checks, which detect new, unrecognised viruses in a sandbox environment away from a businesses core systems.
- **Active protection and behavioural scanning:** Shut down even the most sophisticated malware via continuous real-time monitoring that detects programs performing actions commonly associated with malware exploits.

ALL DEVICES MONITORED FROM OUR CENTRALISED DASHBOARD

The screenshot displays the 'Default Server' configuration window in the Acme Enterprises dashboard. The window is divided into several sections:

- General:** Policy name: Default Server; Type: Server.
- Settings:** Includes checkboxes for 'Show Task Bar icon', 'Allow user to run manual scans', 'Allow user to cancel, pause and resume scans', and 'Allow user to scan files and folder in Windows Explorer right-click menu'.
- End-User Interaction:** Includes a checkbox for 'Show Task Bar icon'.
- Quarantine:** 'Delete items from quarantine that are older than: 30 day(s)'. There is an unchecked checkbox next to the value.
- Updating:** 'Update threat definitions every: 1 hour(s)'. There is a checked checkbox next to the value.
- No communication from Managed Antivirus Agent:** 'The Managed Antivirus Check will fail if the Agent has not reported in. Use the drop down box to indicate how quickly the check will fail: 2 cycles = check will fail after 12.5 minutes of inactivity'.

The background shows a list of monitored devices under 'Monitoring and Management' and a table of system check results.
